| 7. Point of sale (POS) | 16. Settings & backup |
| 8. Ecommerce orders | 17. Jersey retail domain fit |
| 9. Custom & team jersey orders | 18. Later-phase items |

1. Platform overview

Jerzyfy runs on the **Jersey Commerce Engine** — a production-ready, multi-tenant commerce platform built for jersey and sportswear retail. Shop name, branding, catalog, and domain are tenant data, not hard-coded in the product.

One platform serves three sales channels: a premium customer website, an in-store POS register, and a full ERP/admin staff portal — all sharing one inventory, CRM, and payment ledger.

- Storefront
- POS
- ERP / Admin
- Custom jersey engine
- Multi-tenant
- India-ready (INR · UPI)

Capability area	What it delivers
Commerce	Online catalog, cart, checkout, promo codes, pickup or delivery
In-store	Register sessions, barcode scan, held carts, cash/UPI/card tender
Operations	Inventory ledger, purchasing, expenses, refunds, receipts
Custom work	Team/bulk jersey enquiries, quotes, design approval, production tracking
Insight	KPI dashboard, channel reports, CSV export
Content	Live website customizer (theme, hero, sections, SEO)

2. Applications

App	Audience	Role
Storefront	Customers	Shop browse, cart, checkout, account, custom-order enquiries
Staff portal (Admin + ERP)	Owners, managers, website staff	Catalog, stock, orders, CRM, purchasing, CMS, reports, settings
POS	Cashiers	Register open/close, sell, hold carts, refunds, thermal receipts
API	System	NestJS REST + WebSocket, PostgreSQL, Redis, Prisma

In production, POS is nested under the staff portal at /pos. Staff can switch between Admin, ERP, and POS modes without leaving the portal.

3. Multi-tenant platform & staff access

- Tenant isolation**
Every record is scoped to a tenant. JWT carries tenantId; the API never crosses shop boundaries.
- Custom domains**
Storefront resolves branding and catalog from the shop’s host / subdomain.

Staff authentication

Email/password login, refresh-token rotation, forced password change, Redis session denylist.

Realtime sync

WebSocket invalidate events keep POS and ERP views in sync after sales and stock changes.

Roles

Role	Typical access
SUPER_ADMIN	Full platform permissions (hidden from lower roles)
OWNER	Full shop catalog and business control
MANAGER	Day-to-day ops; cannot manage settings or assign OWNER
CASHIER	POS sales and refunds; limited reporting
INVENTORY_MANAGER	Stock and purchasing; no expenses/reports by default
WEBSITE_MANAGER	CMS, promos, products, online orders

Fine-grained permission codes (60+) cover products, inventory, sales, orders, custom orders, reports, and settings. User management lives under **Users** in the staff portal. Money and stock mutations are audit-logged.

4. Online storefront

Customer-facing shop with tenant theme, SEO, and a premium homepage experience.

Tenant branding Logo, favicon, colours, and fonts loaded from website settings at runtime.	Configurable homepage Hero, marquee, featured categories/products, best-sellers, new arrivals, trust, CTA.
Catalog browse Search, filters, sort, pagination, nested category pages, collection tiles.	Product detail Size/colour variants, front/side/back gallery, stock status, compare-at / % off.
Cart & checkout Guest cart token, server-side pricing, promo codes, stock reservation, order number.	Fulfillment choices Home delivery or store pickup; shipping free / fixed / free-above-threshold.
Customer account Profile, order history & detail, cancel where allowed.	Flexible login Password, email OTP, SMS OTP, Google OAuth — toggled per tenant.

Customer journeys

- Browse → cart → checkout → order success (ORD-#####)
- Account login / register / Google complete / profile completion
- About page (CMS-driven)
- Custom jersey enquiry & public order tracking pages

SEO includes metadata, Open Graph, and JSON-LD for Organization, Product, and Breadcrumb.

5. Catalog & media

Feature	Details
Products	Name, slug, brand, descriptions, SEO, draft/active/archived, featured flag
Variants	Size, colour, SKU (auto), barcode, cost / selling / compare-at, tax override, weight
Jersey size helpers	Bulk “add adult sizes” (S–XXL) for sportswear workflows
Images	Ordered uploads with front / side / back convention
Categories	Nested tree, images, sort order, status
Uniqueness	SKU and barcode unique per tenant

6. Inventory

Per-variant stock

On-hand, reserved, and available quantities for every size/colour SKU.

Append-only ledger

Opening, purchase, sale, online order, return, damage, adjustment, transfer, cancel.

Reservations

Ecommerce and custom orders hold stock without reducing on-hand until consume.

Low-stock alerts

Per-variant reorder level; dedicated low-stock and movements views.

- Barcode / SKU lookup for POS and ERP
- Stock valuation (qty × cost; reports also show selling value)
- Concurrency-safe mutations for register and checkout

7. Point of sale (POS)

Built for fast counter sales with USB barcode scanners and India payment tenders.

Feature	What staff can do
Register session	Open/close float; expected cash = open + cash sales – cash refunds
Product lookup	Name, SKU, or barcode (scanner → search + Enter)
Working cart	Line and cart discounts (fixed or %); price snapshot at complete
Hold / resume	Park carts without inventory reservation
Customer attach	Walk-in or link CRM customer (blocked customers rejected)
Complete sale	Invoice INV-#####, payments, inventory SALE, receipt payload
Tender	Cash (with change), UPI, card, other; split tender supported
Sales history	Filterable list and sale detail
Cancel / refund	Restock or damage/none; full or partial refunds
Thermal receipt	Browser print (HTML ~80mm); no ESC/POS hardware yet

8. Ecommerce orders (ERP)

Staff manage website (and channel) orders from a shared order model.

- **Sources:** Website, POS-linked, WhatsApp, Manual
- **Status flow:** Pending → Confirmed → Processing → Ready → Shipped → Completed (plus cancel / return / refund paths)
- **Pickup path:** Store pickup skips the Shipped step
- **Stock:** Reserve at checkout; release on cancel; consume on complete
- **Safety:** Idempotent checkout with cart lock
- **Revenue:** Completed orders counted once (not double-counted with linked POS sales)

9. Custom & team jersey orders

Domain specialty for Jerzyfy: bulk and team kit workflows from enquiry through production — not a generic “contact form.”

Order types

Custom jersey, team, corporate, college, tournament, bulk.

Guest enquiry

Contact creates / matches CRM customer; file references attached.

Quotes

Versioned quotes (QT-##### v1/v2...); accept, supersede, or expire.

Ordering modes

Player list (name / number / size) or size-quantity matrix.

Customization pricing

Tenant-priced fixed, per-item, or percentage options — snapshot on quote.

Design approval

Upload versions; request approval; approve or request changes via public token.

Deposits & balances

Payment state tracked separately from production status.

Production tracking

Design → materials → production → QC → ready; timeline and notes.

ERP filters: Enquiries / Quotes / Production. Dedicated custom-orders report available.

10. Payments & refunds

Payment methods

Cash, UPI, Card, Online, Bank transfer, Other — shared ledger for POS sales, ecommerce orders, and custom orders.

- Duplicate UPI/card reference guard per tenant method
- Razorpay settings UI with encrypted secrets (live online capture is later-phase)
- Today's online flow: COD, pay-in-store, or staff-recorded payment in ERP/POS

Refunds & receipts

- Full or partial refunds with restock modes: Restock / Damage / None
- Refund payment rows are append-only (originals never deleted)
- Frozen HTML receipt payloads for reprint; thermal browser print for POS

11. Customers & CRM

Profiles

Phone-normalised identity, email, address, active / inactive / blocked status.

Duplicate detection

Warns on possible matches; optional allow-duplicate override.

Tags & notes

Tenant tags (e.g. Football, VIP) and internal staff notes.

Segments

New, Repeat, High value ($\geq$ ₹10k), Inactive (90 days).

- Derived spend/order metrics from POS + completed web orders; separate custom-order metrics
- Activity history across sales, orders, and custom work
- Fast POS customer lookup on the register
- Email / SMS / WhatsApp opt-in storage (campaign sending not productized yet)

12. Suppliers & purchasing

Feature	Details
Supplier CRM	Contact, tax fields, status; balance = purchases – payments
Purchase orders	P0-#####; Draft → Ordered → Partial/Full received / Cancelled
Receiving	Partial receipts; inventory PURCHASE movements; cost layers
Tenant flags	Allow over-receive, overpay, update variant cost on receive
Supplier payments (AP)	Cash / UPI / card / bank / other — separate from customer payments

Purchase returns are not implemented; use stock adjustments when needed.

13. Expenses

Operating expense tracking for shop P&L visibility (not a full accounting ledger).

- Seeded categories: Rent, Electricity, Salary, Transport, Marketing, Packaging, Maintenance, Misc
- Create and edit expenses; void instead of hard-delete
- Only active expenses count in totals and reports

14. Dashboard & reports

KPI dashboard

Revenue, COGS, gross profit/margin, orders, AOV, customers, inventory value, supplier outstanding, expenses — with date presets (today, yesterday, 7d, 30d, this/last month, custom) in the tenant timezone (default Asia/Kolkata).

Cards are role-filtered (e.g. cashiers see ops KPIs, not gross profit/expenses by default). Results are Redis-cached briefly per tenant/user.

Report modules

Report	Focus
Sales	Channel and product breakdowns
Inventory	Stock valuation and movement insight
Purchases	Supplier / PO performance and AP
Customers	CRM segments and spend
Payments	Tender mix
Expenses	Category trends
Custom orders	Enquiry → quote → production funnel

CSV export is available and audited. Excel/PDF export is later work.

15. Website CMS & promotions

Live website customizer

- Branding, theme colours/fonts, SEO, announcement bar
- Header navigation, hero slides, homepage sections
- Footer, socials, About page content
- Live iframe preview while editing

Promo codes

- Fixed amount or percentage off
- Minimum subtotal, maximum discount, usage limits, date window
- Active / disabled status; applied on storefront cart and re-validated at checkout

16. Settings & backup

Area	Features
Business	Name, slug, timezone, currency (tenant)
Tax & shipping	Default tax rate, inclusive pricing; free / fixed shipping + free-above threshold
Payments	Razorpay enable + encrypted credentials
Authentication	Toggle password / email OTP / SMS OTP / Google; encrypted provider secrets
Backup	Enable schedule, path, retain copies, run history

17. Jersey & sportswear domain fit

Jerzyfy's first live tenant is a jersey retail business. The product is shaped for that trade:

- **Product shape:** Club kits, national kits, kids, custom/print bases; adult S–XXL and kids sizes as one variant per size
- **Imagery:** Front / side / back product shots; collection tiles for homepage merchandising
- **Customization commerce:** Names and numbers, team colours, player lists, bulk size matrices, design approval, deposits before production
- **Channels:** Walk-in POS + website catalog + custom/team enquiries (WhatsApp/manual as order sources)
- **India retail ops:** INR, UPI tender, Asia/Kolkata reporting, MSG91 OTP option

18. Later-phase items (honest scope)

These capabilities are designed for or partially prepared, but are **not** part of the current go-live. Documenting them prevents UAT confusion.

Item	Current behaviour
Live online card capture (Razorpay)	Settings exist; capture not wired — use COD / pay-in-store / staff record
Customer forgot-password email	Staff sets a temporary password; forced change on next login
ESC/POS printers & cash drawer	Browser HTML thermal receipts only
WhatsApp / email campaigns	Communication events stored; sending not productized
Purchase returns / FIFO–LIFO	Not implemented
Reviews, wishlists, loyalty	Not in current storefront phase
Full general ledger / GST filing	Expenses are operational records only
Public tenant self-signup	Bootstrap secret only

Phase map (shipped)

Phase	Capability
1	Monorepo, database, tenants foundation
2	Auth, RBAC, isolation
3	Products & categories
4	Inventory ledger
5	POS sessions, carts, sales
6	Payments, refunds, receipts
7	Customers / CRM
8	Suppliers & purchasing
9	Ecommerce order engine
10	Premium storefront + CMS + promos
11	Custom / team jersey orders
12	Dashboard, reports, expenses
